Application Procedure

Surface preparation: The floor must be strong, clean and resistant to load. All surfaces must be cleaned from oil, dirt and similar residues before application. In primer application, ISONEM MS Polymer is diluted with 200 % water (1 kg MS Polymer:2 kg water) and fed to the surface with a hard brush. The main application should be started after the primer application is waited to dry between 1 - 2 hours. In steel/metal surfaces, the surfaced should be primed with ISONEM Anti Rust Primer (Anticorrosive primer), consumption of 0,250 - 0,350 kg/m².

Things to consider during and after the application: The application surface must be clean and free from all impurities like dirt, oil, and mud. There should not be exposed to ponding, snow should not accumulate and also the surface should be inclined. Protect from frost.

<u>Other ISONEM products recommended:</u> In primer application, ISONEM MS POLYMER (diluted) or ISONEM ANTI RUST PRIMER should be used depending on the application surface.

IMPORTANT

The surface should be protected from rain, water, mechanical loads and impacts for 24 hours during and after the application. Depending on the climatic conditions and air temperature, you must supply the product as summer or winter. Do not apply around the dew point temperature $(2 - 5 \degree C)$.
